DETAILED ACTION

This application is in condition for allowance except for the following formal matters:

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the dielectric layer perforated with a plurality of openings recited in claims 1 and 8 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

Claims 1-14 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not disclose or fairly teach each first sub metal layer being formed by a plurality of first unit cells arranged in rows and columns to form a two-dimensional array structure, and each first unit cell has a main body and a plurality of connecting arms joining adjacent first unit cells and each of the second sub metal layer being formed by a plurality of second unit cells arranged in rows and columns to form a two-dimensional array structure, the second metal layer is situated below the first metal layer, each second unit cell is corresponding to individual first unit cell in a one-on-one manner, and adjacent second unit cells are joined with one another, and each second unit cell is made of a metal wire loop.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
